Small Business Private Cloud - IT Package

Symmetric Computing is offering small businesses in the Greater Boston Area the opportunity to install a fully owned private cloud server in their office that will service employees in the office, and provide secure remote access to employees and associates outside the office via the Internet. The package includes the server, on-site installation and configuration, remote access setup, training and a 1 year support contract and 3 years server warranty.

Architects and Builders – We will move your Revit and BIM database files to the server so all your workstations and other devices can operate on a shared database at the same time. We will also move your Dropbox files to the server. This will dramatically improve multi-user performance.

Server

Intel Xeon E5-1630 v3 3.7 GHz processor
32-GB 2133 MHz DDR4 ECC Reg
2 TB mirrored drives (4 drive bays)
Microsoft Windows Server 2012 R2 -
Essentials (25 client license)
(See private cloud server brief at web site)
